

Production Supporting Systems in Factories

Smart Sensors and Information Systems

อุปกรณ์ตรวจวัดอัจฉริยะและระบบสารสนเทศ

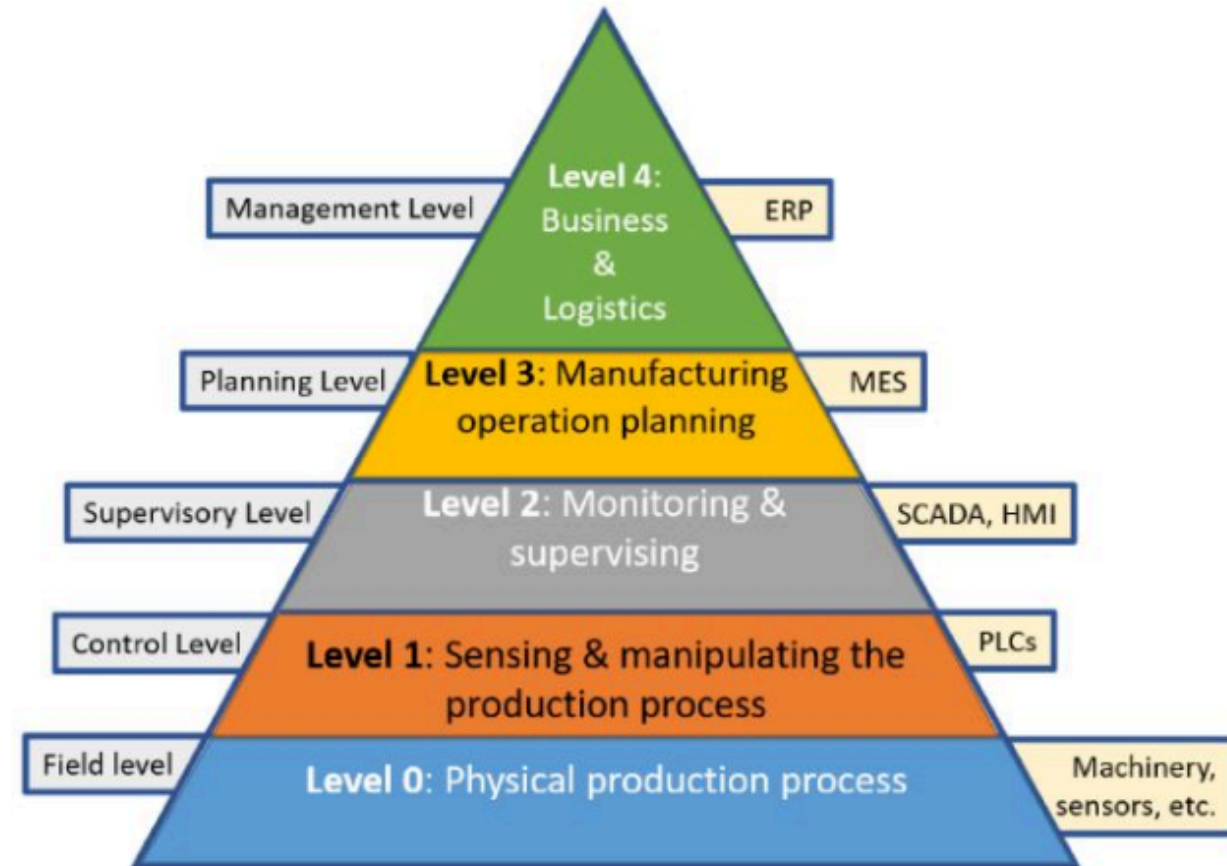

ISA-95 Standard

- International standard for the integration of enterprise and control systems.
- Defines the hierarchy of systems in manufacturing operations.

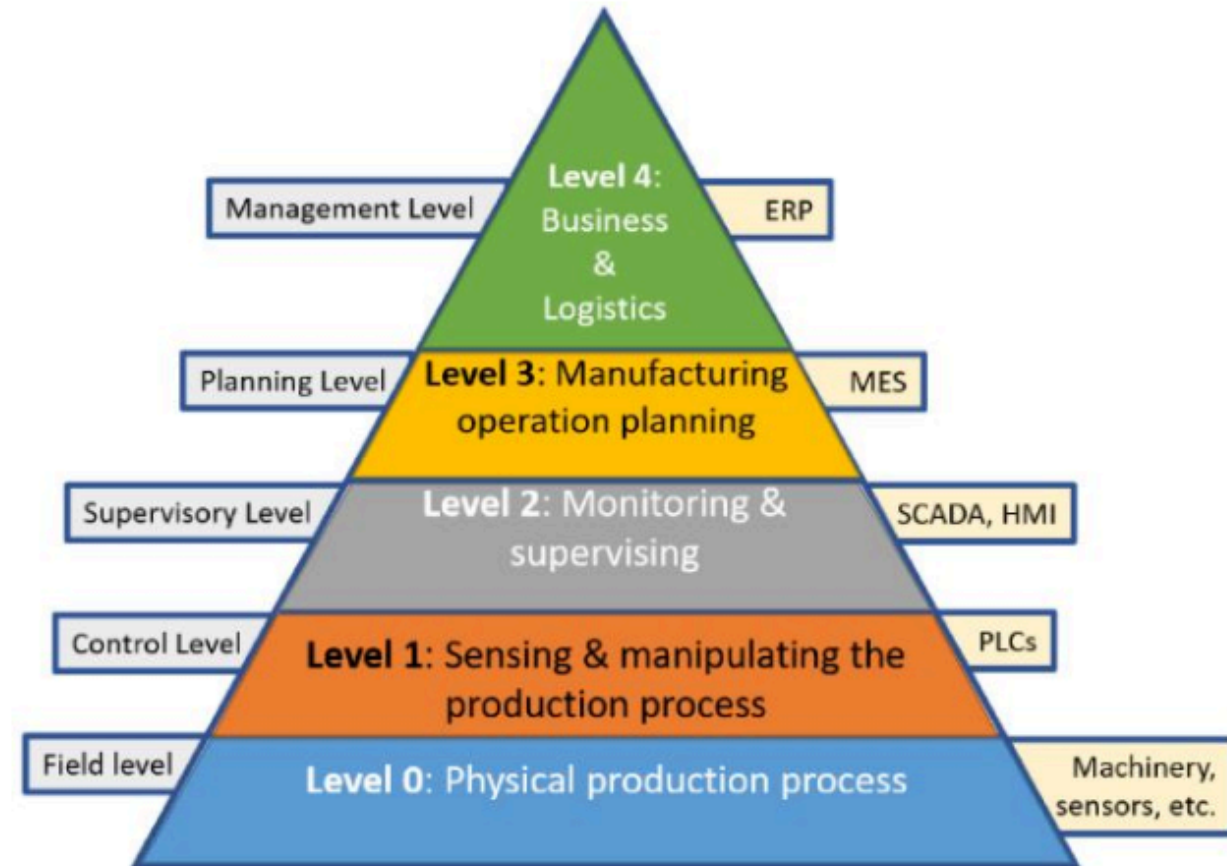

Level 0

- **Production Process**
- The actual physical and chemical processes on the plant floor.

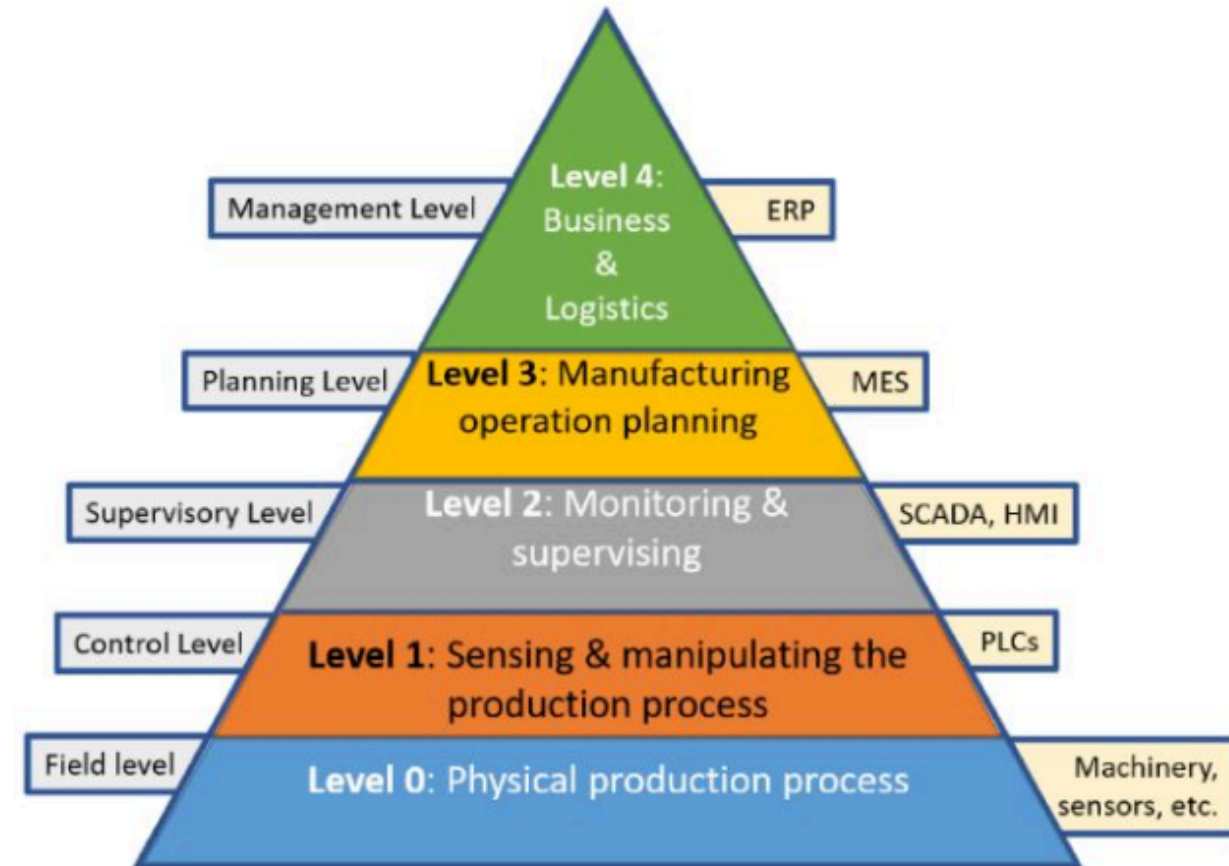

Level 1

- **Sensing and Manipulation**
- Sensors and actuators that interact directly with the production process.

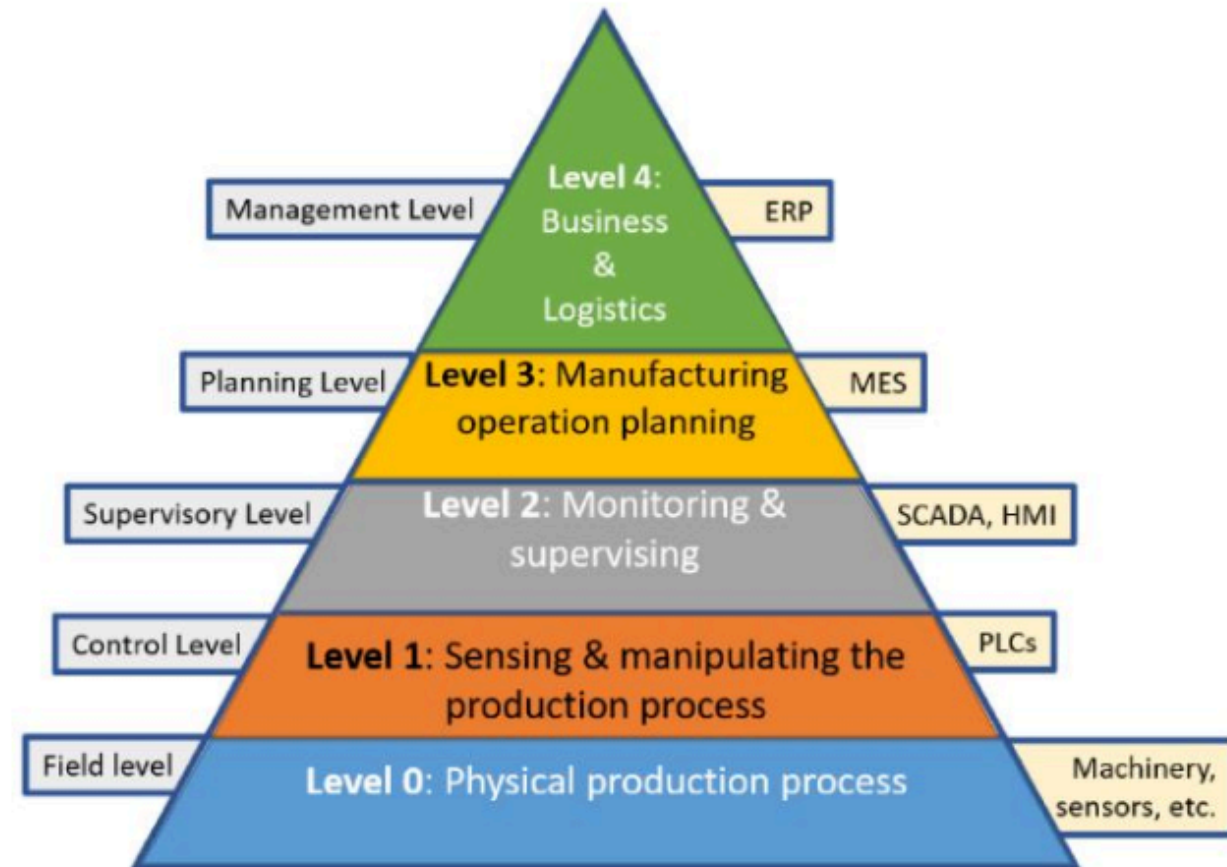

Levels 2

- **Monitoring and Supervision**
- Systems like SCADA and HMI that monitor and control the process in real-time.

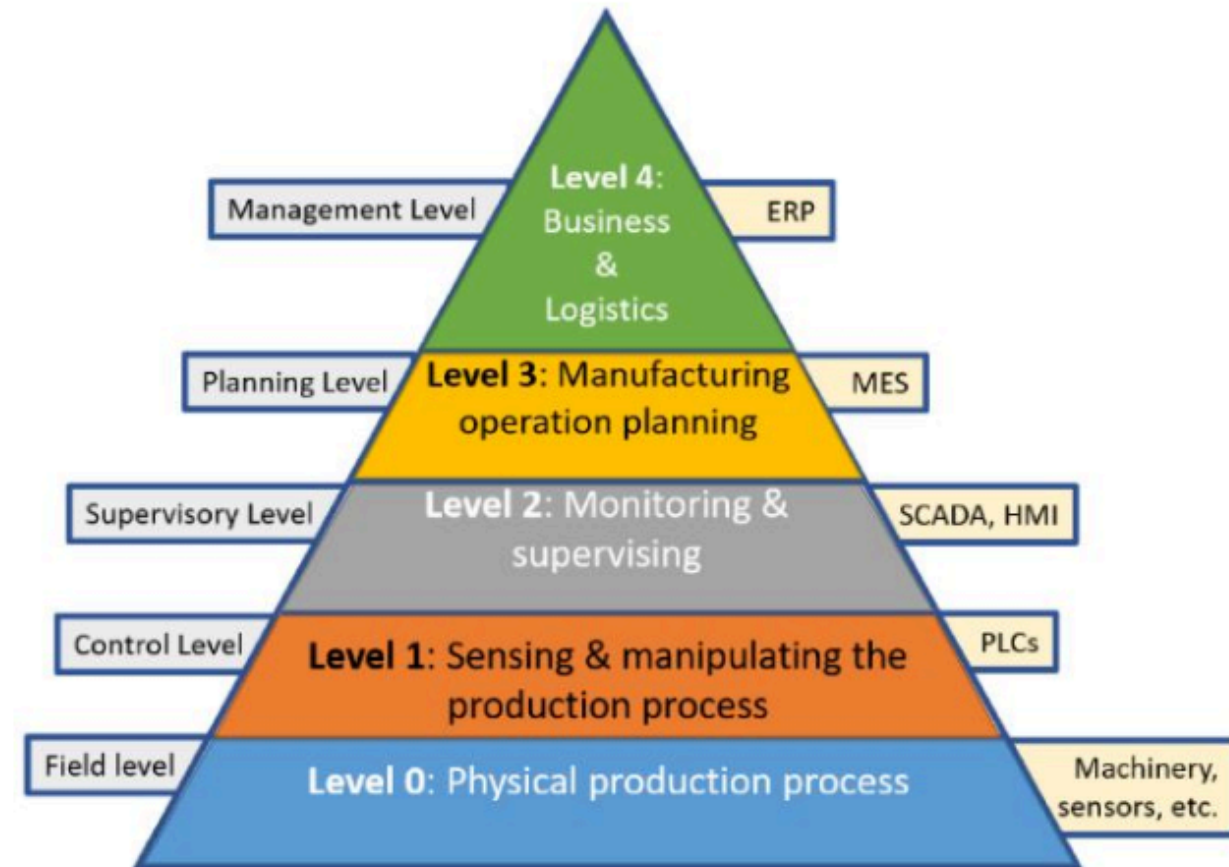

Levels 3

- **Manufacturing Operations Management**
- Manages day-to-day production, including scheduling, quality, and inventory. MES (Manufacturing Execution System) is a key component here.

Levels 4

- **Business Planning and Logistics**
- Handles enterprise-level functions like production planning, order processing, and supply chain management, typically managed by ERP systems.

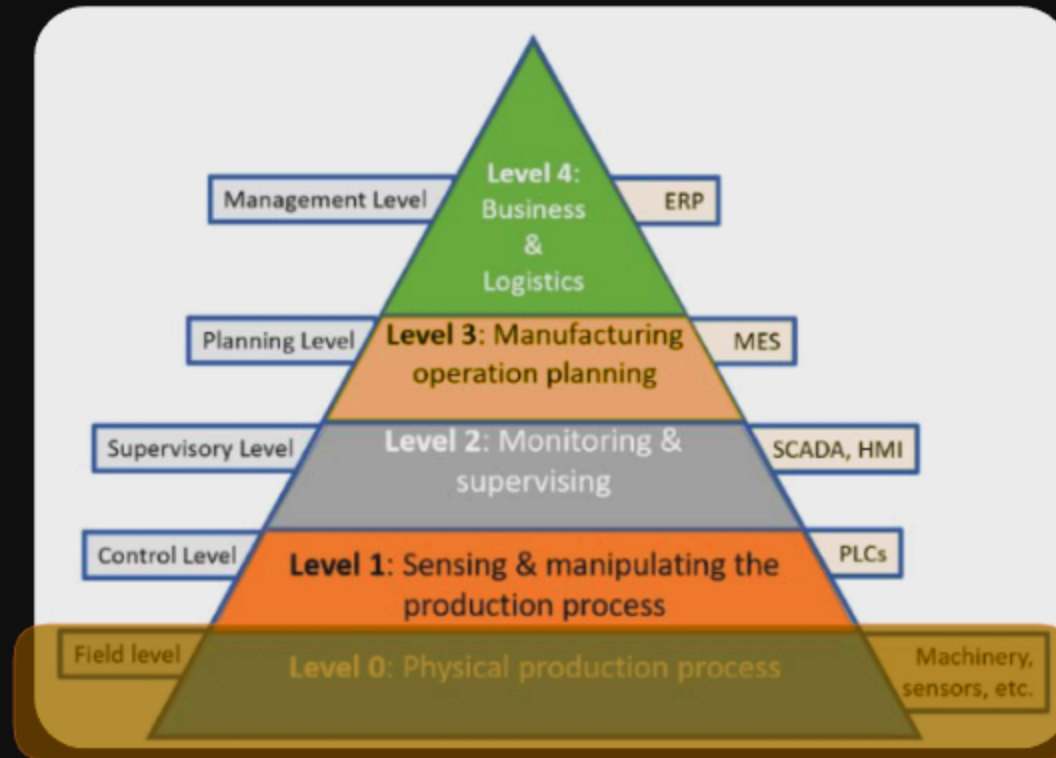

Note

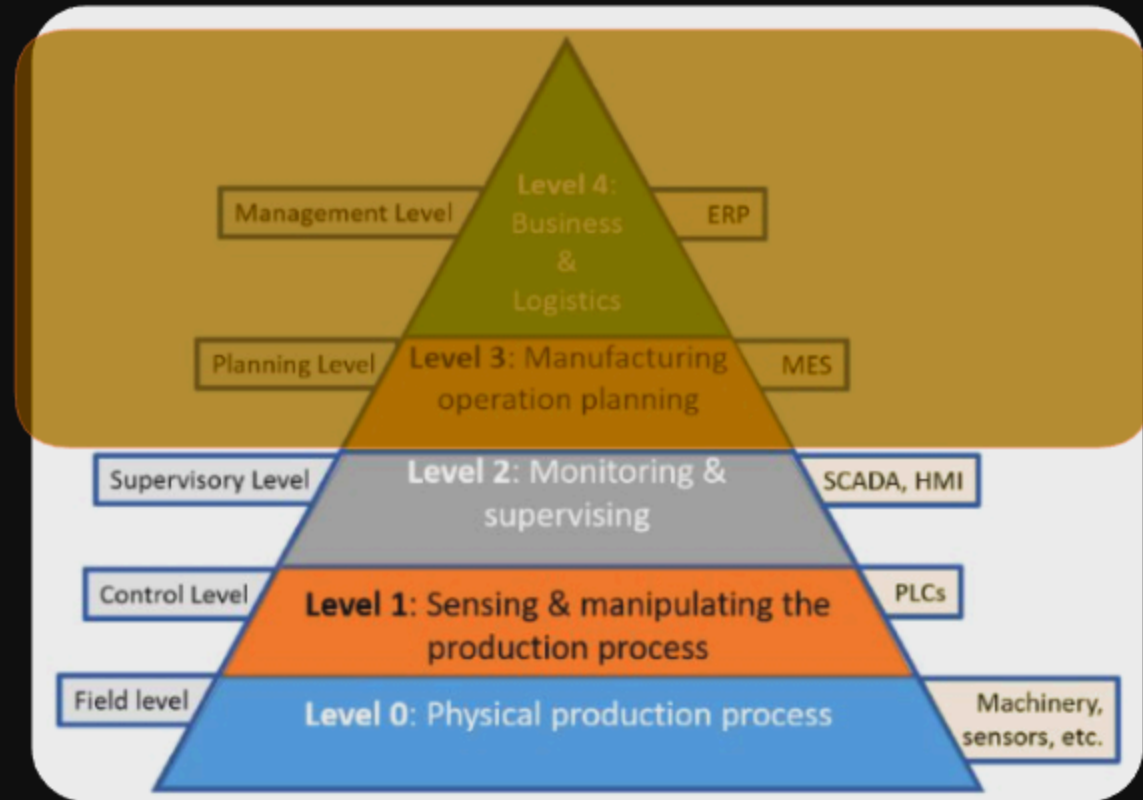

- This diagram is rather conceptual and may not represent all real-world scenarios.
- In practice, systems can overlap and interact in complex ways.

What are we doing in this course?

- We will use sensors and software that are related to these levels.
- I only pick the options that are accessible and affordable.
 - Open-source softwares
 - Low-cost sensors and devices
- But they are still relevant to real-world applications.

ERPNext

Week	Class	Topic
9 Feb	1, 2	ERPNext (Intro, Purchase, Sales)
16 Feb	3, 4	ERPNext (Inventory, Manufacturing)
23 Feb	5, 6	Node-Red (Basic, MQTT, Integration)
2 Mar	7, 8	Proposal Week
9 Mar		Project Presentation

Let's go...
