

Production Supporting Systems in Factories

Node-RED

What is Node-RED?

- A low-code, visual programming tool that allows users to create applications by wiring together hardware devices, APIs, and online services using a web-based flow editor.
- It runs on Node.js and is well-suited for automating workflows and processing data, with popular applications in home automation, industrial control, and other event-driven systems.

Navigating around Node-RED

Create flows to

- Show timestamp in the `debug` panel.
- Show date and time using `function` node. *(See code on the other page.)*
- Send continuous random numbers. (Use `Math.random()`)
- Use `switch` and `change` .

```
const date = new Date();  
msg.payload = date.toDateString();  
return msg;
```
