Turning Sensor Display On and Off

Flow

Inject Node

- This inject is for the button later.

Change Node (Set Context)

The image shows a workflow editor interface. On the left, a canvas displays two nodes: a yellow 'change: 2 rules' node and an orange 'Random Data' node. The 'change: 2 rules' node is highlighted with a red rectangle. On the right, the 'Properties' panel for the selected node is shown. It includes a 'Name' field and a 'Rules' section. The 'Rules' section contains two rule entries, each with a 'Set' dropdown, a path field, and a 'to the value' field. The first rule sets 'flow: machine_status' to 'OFF', and the second rule sets 'flow: sensor_value' to '0'. Both rule entries are highlighted with a red rectangle.

- Set to the value

Random Data Function Node

```
const rand = Math.random();  
msg.payload = Math.round(rand * 100) / 100;  
return msg;
```

Change Node (Set Sensor Context)

Sensor Value Handler Function Node

```
const machine_status = flow.get("machine_status") ?? "OFF";
const sensor_value = flow.get("sensor_value") ?? 0;

if (machine_status === "ON") {
  msg.payload = sensor_value;
} else {
  msg.payload = 0;
}
return msg;
```

Button Group Node Setup

The screenshot displays the Node-RED interface with a 'Machine Control' button group node highlighted by a red box. The node is connected to a 'Sensor Value Handler' node. The right sidebar shows the configuration options for the node, including 'Appearance', 'Colors', and 'Options'.
